

vema textile
Sourcing & manufacturing

OUR HISTORY

Vema Textile takes place as a trading company in this market in 2019. As a small factory, we started our own production and became a family with employees. Vema Textile is growing day by day.

Vema textile can coordinate design, cutting, sewing, washing and finishing process with its own experienced team. Vema textile is manufacturing in every field of denim.

The capacity of Vema Textile consists of the products made of denim fabric at 75% and non-denim fabric at 25% with 100.000 pcs monthly sewing capacity.

Vema textile is proud of itself on providing comprehensive service to its customers.

Our company respects textile right, freedoms of the employees and conducts the fundamental right of the employees.

Our best feature; price, quality and short term. You can see these features when you look at our customer references.

Our Facilities

Istanbul HQ

Services

TREND FORECASTING

Our inspiration is drawn from our everyday surroundings. Our design team travels around the world frequently, attending fashion fairs and visiting trendsetting shops, to keep up to date with emerging trends.

QUALITY

All-round quality through the use of cutting-edge materials.

PRODUCTION

A 1.000 m² production area with a production capacity of 100,000 pieces per month.

DESIGN

A design office that develops specific products targeting every country in which we operate.

RESEARCH & DEVELOPMENT

An R&D division that develops value-added product designs for exportation purposes.

STYLE

Functional yet stylish technical designs that serve as a benchmark for the denim wear fashion industry.

FABRIC SOURCING and R&D

Our sourcing team understands, discusses and interprets the needs and ideas of our customers. Principle of our company is breathing new life into fashion with making differences in male/female clothing with unique designs, washings, quality and service concept by investing on R&D departments, enriching its collections in accordance with customer's demands and expectations, improving its quality continuously and growing in the market.

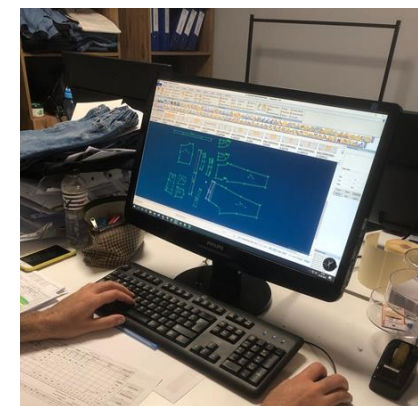

DESIGN

DESIGN

Developing quick and continuous collections with innovative design team who follows the fashion trends very closely. Our talented design team provides a range of stylistic choices ranging from classic, simple styles for casualwear to more intricate styles for a more edgy, sophisticated approach.

MODELLING ROOM

4 highly skilled pattern makers both experienced in GERBER program to fulfil all pattern requirements.

MODELLING ROOM

PLANNING DEPARTMENT

Main organisation unit of the company, makes critical path analysis, predicts and sets all stages of production. Connects and plans in-house and subcontracted production units for a rapid on-time deliveries.

CUTTING

Fabric is rolled out and placed on the tables 20 m long and layered. Amount variable from 50-100 layers. Pattern paper with fabric parts is fixed on top of the fabric pile to ensure accurate cutting.

EMBELLISHMENT

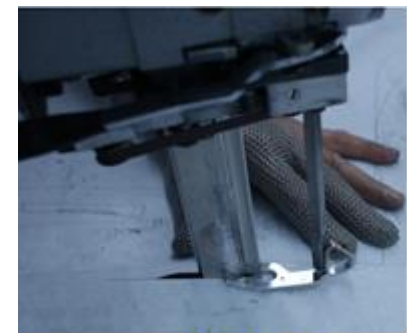

All kinds of embroidery, print and artwork can be applied on garments. This process can be done before or after washing depending on the design.

SEWING

Each pair of jeans is made up of 19 to 42 parts, depending on the style. Each seamstress operates one machine and handles one stage in the sewing process. 50-80 stages involved to finalise garment.

WASHING

Experienced design and washing developers choose the most suitable wash & fabric option from a wide range, offering a unique collection for our customers. Creative design technicians employed for research and experimenting new washing techniques. Innovative washings and adaptation of innovative washings to the production are being done in accordance with our customers demands by experienced team who follows latest trends at the washing R&D department.
